

# Top extended horizontal menu

This module is based on default top horizontal menu and has 3 main parts

1. simple menu
2. mega menu
3. mega menu for cms pages

If you wish to add new page into one of those categories. Just pick your page and press add button.

## 1. simple menu

This is the default prestashop menu.

## 2. mega menu

Manufacturers will be displayed only in first and second level of your menu. So if you don't want to display manufacturers in your mega menu simply create mega menu in third level.

For example:

**home(first level) -> second level -> nameOfMyMegaMenu -> myCategories -> mySubcategories**

Please note, that the hierarchy in mega menu must be like the one above.

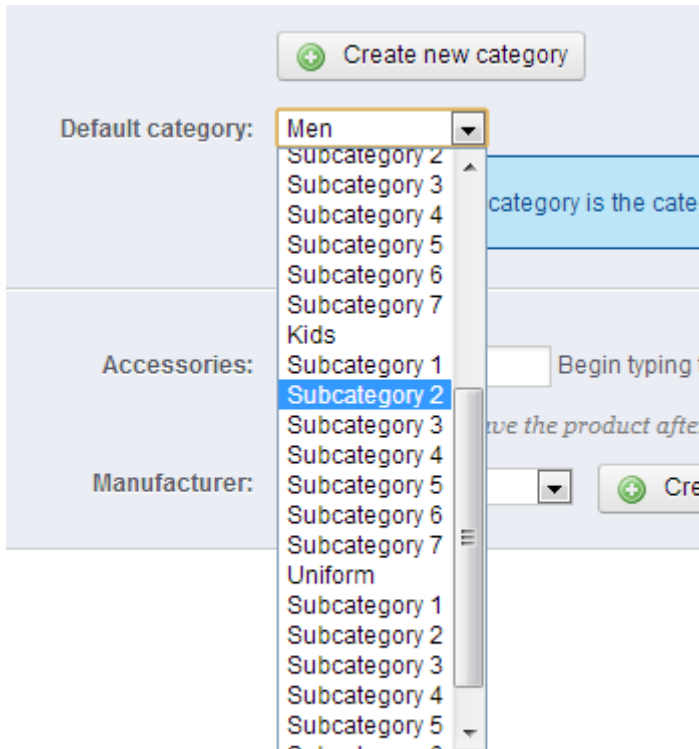

So you need **MegaMenuName -> SomeCategories -> andSomeSubcategories** to display your mega menu properly.

How to add category images?

Men	Woman	Kids	Uniform	
Subcategory 1	Subcategory 1	Subcategory 1	Subcategory 1	
Subcategory 2	Subcategory 2	Subcategory 2	Subcategory 2	
Subcategory 3	Subcategory 3	Subcategory 3	Subcategory 3	
Subcategory 4	Subcategory 4	Subcategory 4	Subcategory 4	
Subcategory 5	Subcategory 5	Subcategory 5	Subcategory 5	
Subcategory 6	Subcategory 6	Subcategory 6	Subcategory 6	
Subcategory 7	Subcategory 7	Subcategory 7	Subcategory 7	

Categories and subcategories can display product images which have their category set as default.

So for example if you want to display image for Kids subcategory 2, then set product default category -> kids subcategory 2

### 3. mega menu for CMS pages

This menu allows you to add any CMS page you wish. Just create new cms page in Preferences -> CMS and add the page into your menu.
